

Party Government in Europe Database (PAGED) – Central Eastern and Western Europe Dataset party dataset

This comparative dataset merges the data from Hellström et al. (2021) and Hellström et al. (2024), collected for the volumes Bergman et al. (2021) and Bergman et al. (2024)

The dataset provides detailed information on parties represented in parliament in 27 European countries from 1945 (or their democratic transitions). The parties are nested in the cabinets present in the PAGED Central Eastern and Western Europe dataset.

Structure of the codebook

The codebook is structured as follows: The first section briefly defines the basic theoretical concepts used to collect the data. To maximize consistency across datasets, all these concepts

24.10.2025 Johan Hellström & Jonas Lindahl

are largely congruent with those applied in the previous datasets on *The Representative Democracy Data Archive*. The following sections then each contain detailed information on

- the name of the variable as it is defined in the dataset,
- the label briefly describing the variable,
- the attached value label,
- relevant additional information on specific coding decisions (where applicable),

For several variables such as the partisan composition of the cabinet or the allocation of portfolios the information is given using party abbreviations and/or party-IDs. Please refer to the corresponding *Party codebook* for further information. For additional information on coding and definition of most of the variables please see *Notes on Coding Principles* for further information.
